SYBLY STARTS MANUFACTURING RECYCLED POLYESTER YARN

Sybly Industries Limited has started manufacturing recycled yarn and currently operating in B2B market space to test the waters for its target of finally settling it as a brand.

Sybly has acquired top quality recycled fibre with excellent properties. The B2B market has also given a brilliant response to the move. The yarn's quality is above par and the demand that is coming out from the market is just astonishing.

This move further consolidates the market reports and the stand that Sybly took a few months back to move into the recycled space that is more or less still a vacuum space.
